Codebook cell interior (state, 16-dim) — libero_object task 0, N=7458, K=100->K_eff=98, 93 cells diagnosed
ellipses = the Gaussian l2_codebook actually samples from, points = the real data
Q1 is a cell Gaussian: clearly non-Gaussian (pooled KS 0.168)   Q2 is it diagonal: not adequate (diag worse in 62/93 cells, median |r| 0.319)
